**FULLY  
PATENTED**

**AWARD  
WINNING**

**ATTENTION:** Hospital insurance carriers are no longer covering HAI cases and this is costing hospitals hundreds of thousands of dollars annually and HAI is the 4th leading cause of death in the United States. On average, 20,000 HAI cases annually are linked to poor hand hygiene and the SaniTimer™ is proven to cut this statistic down by up to 60%! Outfit your entire facility with the SaniTimer™ for a fraction of the cost of a **SINGLE** HAI case. This is the most cost effective way to cut down on HAI's in your facility.

The SaniTimer™ is easily attached to an existing water faucet on any standard hand-washing sink or handwashing station. When the water is turned on it starts counting down 30 seconds on the LED timer allowing for proper lathering, scrubbing and rinsing and meeting the minimum 20 seconds as regulated by the CDC. When the 30 seconds has elapsed, the SaniTimer™ emits a beep sound to signal cycle completion.

Efficiently and effectively cut down on harmful bacteria and the spread of infection in your establishment by going back to square one, basic hand hygiene done right each and every time.

The CDC has researched, studied and dictated the proper methodology of hand hygiene is washing your hands for a minimum of 20 seconds and we have used this information to create the SaniTimer™ to ensure proper hand sanitation.
