GreenPro Odourzyme

Bio-enzymatic urine digester
and odour neutraliser

GREEN PRO ODOURZYME has been developed using a concentrated bio-enzymatic formula, containing selected strains of natural bacillus bacteria, enzyme cultures, penetrating wetting agents and a powerful odour neutraliser.

Restrooms often have a build-up of urine in the tile and grout. When mopped over with a cleaning solution, the uric acid is 'activated', and a strong urine odour occurs.

GREEN PRO ODOURZYME's unique enzymatic activity quickly penetrates, digests and removes the toughest urinal buildups and stains, effectively removing the source of the odour.

GREEN PRO ODOURZYME is formulated using eco-friendly enzymes and chemical compounds.

GreenPro Biozyme

Bio-enzymatic trap and
drain treatment

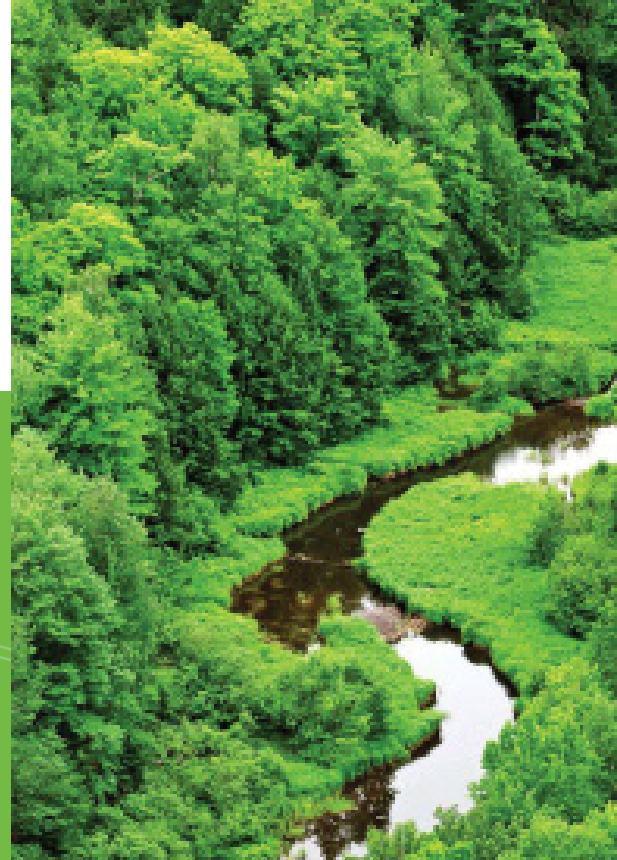

Why use GreenPro **BIOZYME**?

Bacterial digestion is the process of consuming organic matter. GREEN PRO BIOZYME catalyses this naturally-occurring reaction, cleaning and maintaining grease traps, drain lines, septic tanks and drain fields.

GREEN PRO BIOZYME is engineered to produce enzymes with a special appetite for grease and food waste. Living bacteria digest materials that clog grease traps and drains, reducing BOD's, COD's and suspended solids. Regular treatment controls odour, prevents drain blockages and expensive grease trap pumping costs. The bacteria used in GREEN PRO BIOZYME are non-pathogenic, eco-friendly, and not harmful to humans.

Preventative maintenance of drains and grease traps is essential to productive kitchens and food manufacturing operations. Regular applications of GREEN PRO BIOZYME will not only clean your trap and drain, but save you headaches, service calls, and ultimately, money.
