

## CASTLE MF999

Castle **Post Harvest**  
Fruit that looks *good*, sells **first**

### Morpholine Free Carnauba Based Citrus Coating

#### Product Description:

CASTLE MF999 is a high shine quick dry carnauba-based wax designed to function as a high quality post-harvest coating for citrus and meet markets that require a morpholine free status.

CASTLE MF999 may be used to:

**Reduce pitting: Stimulated by low levels of oxygen**

**Reduce off-flavours: During anaerobic respiration**

**Minimise whitening: Less chance of whitening compared to high gloss waxes**

CASTLE MF999 provides a high level natural gloss (over prolonged storage) which is suitable for all export and domestic markets. The shine level of CASTLE MF999 after 30-45 days is as good as a resin coating. CASTLE MF999 allows green fruit to colour-up, depending on maturity and length of shipment.

#### Application:

CASTLE MF999 is best applied through the Micron 2000, spinning cone applicator.

It is important to have the fruit dry before waxing. Preparation is most important aspect before waxing. This allows longer lasting shine. CASTLE MF999 can be applied at a reduced rate compared to other types of citrus coatings.

#### SHELF LIFE:

As a quality assured manufacturer, Castle Chemicals has a stringent Quality assurance programme. As part of this regime, the label on this product shows a batch number and date of manufacture. This product has a shelf life of 24 months from the label printed date of manufacture. This information contained herein is based on data considered accurate. However, no warranty is expressed or implied regarding the accuracy of these data or the results to be obtained from the use thereof. Castle Chemicals assumes no responsibility for personal injury or property damage to vendees, users or third parties caused by the material. Such vendees or users assume all risks associated with the use of material.
