Dabs

P.D.C.B Deodorant Tablets

Product Description:

DABS are solid oval tablets which both deodorise and reodorise. They are formulated with paradichlorobenzene and quality aromatic essential oils and perfume compounds. Their purpose is to overcome mal odours after the odiferous effects of liquid disinfectants and liquid deodorants has worn off. They have no antibacterial powers and their purpose is solely to create a pleasant environmental odour.

Most manufacturers of deodorant blocks and ovals formulate by melting the various ingredients after which pouring the mixture into a mould and allowing it to set.

Castle Chemicals process of manufacture provides for pressing the ovals into shape by machine press which exert extreme pressure, thus producing a finished product which is free from air bubbles and in which the aromatic essential oils and perfume compounds have not been impaired or weakened in the heat process used for melting blocks.

The odour intensity of ovals increases with temperature so that in hot weather they product a much stronger odour, which is naturally when it is most needed.

SHELF LIFE: As a quality assured manufacturer, Castle Chemicals has a stringent Quality assurance programme. As part of this regime, the label on this product shows a batch number and date of manufacture. This product has a shelf life of 24 months from the label printed date of manufacture. This information contained herein is based on data considered accurate. However, no warranty is expressed or implied regarding the accuracy of these data or the results to be obtained from the use thereof. Castle Chemicals assumes no responsibility for personal injury or property damage to vendees, users or third parties caused by the material. Such vendees or users assume all risks associated with the use of material.
