

To Whom It May Concern,

For the past eight months we have been using the Castle Chemicals brand of Exhaust Clean on both the Donaldson Coal Mine sites at Abel & Tasman. The Castle Chemicals Exhaust Clean has been of exceptional quality with no foaming issues to date.

Before we had the opportunity to change brands of exhaust clean on site to the Castle Chemical brand, a rigorous testing procedures had taken place by engineers on site before sign off was granted to changeover.

Castle Chemicals have also provided a reliable dispensing system for the sites that are fully maintained on a regular basis. All of this plus a significant cost savings has been banked compared to the previous brand used.

Regards,
