

## POLY SHINE

### Citrus Coating

#### Product Description:

Poly Shine is a polyethylene coating for citrus fruit. Poly Shine is good for maintaining freshness, moisture control and eating qualities of citrus. In particular mandarins tend to create off flavours if shellac / resin coatings are used. Polyethylene waxes are best suited because of little tendency for ethanol to increase. Research has shown that higher levels of mean ethanol tend to block gas exchange: Polyethylene 800ppm, Carnauba 1300ppm, Shellac 1900ppm

#### Application:

Apply POLY SHINE by spraying / misting onto well-cleaned and dry fruit. For best results use the Micron 2000 to apply the wax.

1 Litre will coat approximately 1 tonne of fruit.

#### SHELF LIFE:

As a quality assured manufacturer, Castle Chemicals has a stringent Quality assurance programme. As part of this regime, the label on this product shows a batch number and date of manufacture. This product has a shelf life of 24 months from the label printed date of manufacture. This information contained herein is based on data considered accurate. However, no warranty is expressed or implied regarding the accuracy of these data or the results to be obtained from the use thereof. Castle Chemicals assumes no responsibility for personal injury or property damage to vendees, users or third parties caused by the material. Such vendees or users assume all risks associated with the use of material.
