Glow Clean

An innovative system to
evaluate and enhance
cleaning performance

Fluorescent Marking Spray + UV/Black Light

An innovative program to evaluate, validate and enhance cleaning performance for healthcare and food service applications.

The GlowClean System

With food safety cleaning critical to the health care and food service, the GlowClean System is an ideal tool to highlight deficiencies and enhance improvements in a cleaning program. GlowClean is a cleaning validation solution that includes the use of a fluorescent marking spray, along with a UV/black light, to allow the user to spray a small quantity of liquid onto a surface that will leave an invisible marker when dry. After the surface is cleaned, the user can use the black light to detect whether the mark was removed, and thus highlight if the surface has been effectively cleaned.

Easy to Use:

- 250ml pump spray bottle can be applied vertically, horizontally, or the underside of surfaces with a 50mm spray area.
- Marked surfaces are easy to detect.

Developed For:

- Food Service
- Health Care
- Aged Care
- Hospitality & Hotel Service

Directions for Use:

- Uncap the finger spray pump, and hold 10-20cm from the surface to be marked, apply a single spray and allow to dry.
- After following the required cleaning procedure for the area, use UV/black light torch to test if the surface has been cleaned properly.
- Never point the black light into anyone's eyes.
