

Safe Link

Closed Loop Technology

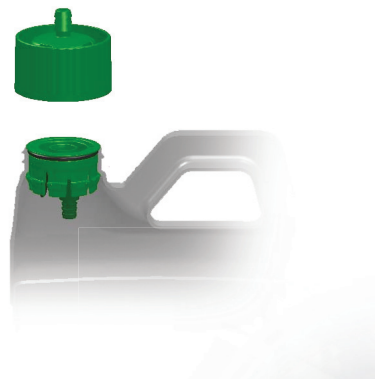

Keeping your staff and business clean and safe.
An innovation in dispensing

Safe Link Closed Loop Chemical Management System

The Safe Link Closed Loop Chemical Management System is a no chemical contact system that eliminates exposure to chemicals when connecting and changing product in almost any chemical dispenser. Safe Link incorporates two components, a spill proof bottle insert and a pick-up cap connection.

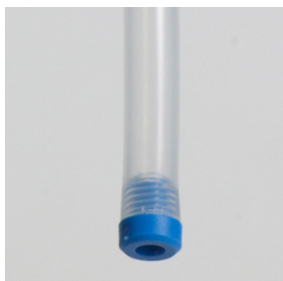

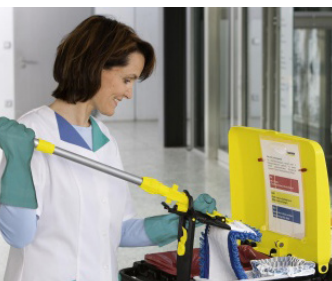

The bottle insert is part of the chemical container installed during the chemical packaging process. The pick-up cap is the connection

on the dispenser chemical feed tubing that “links” the chemical to almost any dispenser.

Safe Link is the superior, spill-proof system that virtually eliminates worker exposure to chemical concentrates, assures accurate dilutions and

provides greater safety for the public, the environment and the surfaces being cleaned. The system meets safety and environmental standards while reducing over usage and is forward and reverse compatible with systems already in use minimizing conversion cost and waste.

Optional metering tip for internal pre-set dilutions

Unique design for problem free production plus grips securely for tamper resistant fit

Products in our 5L range now available in Safe Link

Product Lock and Keys

Different interfaces or mating between the cap and insert work as a lock and key. Different lock and keys allow you to ensure that the right chemical is at the right location.

FOOD SERVICE

GREEN-PRO DISHCLEEN

Non-chlorinated, no foam, food service automatic dishwasher detergent.

#24113-5SL pH 13-14
