#1 IN WASH PERFORMANCE

# OBSIDIAN

## GRAPHENE - CERAMIC

Obsidian is a near perfect volcanic glass, silica rich and high in natural luster. This naturally forged igneous rock is Castle's inspiration for developing an industry leading, next generation graphene/ceramic protectant, meticulously engineered to give a technologically advanced mirror finish, silky smooth to the touch, yet fiercely resistant to the elements.

Obsidian is the next fundamental stage of the extremely successful Alpha Ceramic layering program, now with graphene.

This uniquely compounded formulation is proudly presented by Castles Chemicals advanced Laboratory, giving your vehicle a hydrophobic showroom finish that's so consistently and reliably smooth, you can "Feel The Shine".

**Perfect For: Auto Car Wash Systems, Tunnels and Self-Serve.**

**Accelerates Drying: More hydrophobic effect on car surface makes drying faster.**

**Long Lasting: Provides a lasting shine with nano-scratch resistance due to a more durable finish.**

**High Shine: Provides extra gloss by a using graphene/ceramic combination.**
